

GREEN CLEAN

Kempinski Hotel Corvinus Budapest cleans their property's carpets the green way

Kempinski Hotel Corvinus has been integrating one of the latest green technologies in its effort to clean its large carpeted surfaces, combining efficiency with environmental friendliness. As hotel carpets are fitted, this time consuming process needs to be carried out on the premises, which could pose an inconvenience to guests. But it doesn't ...

... the new technique removes stains without eliminating stain repellents embedded in the carpet, while at the same time using 96% less water than usual carpet cleaning methods. Since the technique is based on heat cleaning, the carpets are dry in half an hour, causing minimal trouble to our guests. In addition to all this, the technique doesn't use chemicals or allergens, which means it doesn't threaten the air quality inside the hotel.
