

Kempinski Hotel  
Corvinus  
BUDAPEST

## Press Release

### **KEMPINSKI CORVINUS CLEANS CARPETS THE GREEN WAY**

The Kempinski Hotel Corvinus Budapest has been integrating the latest green technologies in its effort to clean its expansive carpeted surfaces with a view to efficiency and environmental concerns. Based on the carpet manufacturer's recommendations, the Kempinski Corvinus commissioned cleaning consultant Paul Geißler GmbH of Germany to clean its fitted carpets for the fifth consecutive year, this time introducing a revolutionary new green technique, TEP-TOP-Clean®, to remove stains and soiling. Since the carpeting is fitted, this time consuming process has to be carried out on the Kempinski Corvinus premises, however, the new technique effectively minimizes disturbance as well. TEP-TOP-Clean® earned TÜV Rheinland and the Aachen-based Textiles Flooring Institute (TFI) quality certification.

TEP-TOP-Clean® is based on heat cleaning, which gently removes all stains from textile flooring without removing stain repellents embedded in the carpet. This guarantees that the cleaning process will not result in a deterioration of stain resistance.

The Kempinski Corvinus is also delighted to have chosen TEP-TOP-Clean® as the cleaning process now requires 96% less water than other techniques that we used in the past. This also means that our carpets dry within a half hour, which allows us to open the already treated areas to the guests in a minimal amount of time, furthermore, the process is very quiet and as such, it causes negligible inconvenience to our guests.

TEP-TOP-Clean® also addresses another important concern to hotels, air quality. The technique does not use chemicals and allergens, and utilizes a cleaning enzyme, which contains FDT® Protektin® and is surfactant-free, in order to neutralize odours as well as allergens. This powerful intelligent protein complex is tailor-made for the Kempinski Corvinus's air since the cleaning company analyzes the particles in the air during and after the cleaning process.

The Kempinski Corvinus is proud that courtesy of the latest cleaning technologies, it is not only able to manage maintenance at a high level for the benefit of its guests, but also able to introduce environmentally sound practices in its daily operation.
